Why is the Activity Report not showing my publication from last year?

The top-level view in the main interface is shown above. Note that the preferred date fields (Publication Year, Term) are correct.

Review the details of your record. If you have a date from earlier than the last calendar year in the Month / Season field, it will override the Actual/Projected Year of Publication/Presentation field. The Month/Season data sometimes comes in erroneously from external imports from academic databases and Google Scholar.

Delete the data from Month / Season and it should now show up on your Annual Activity report.
